

Higher - value In line Lower - reach vs market (ECR vs ADP) Bell Cow Handcuff RB role Consistent Moderate High Volatility rank spread

*Spread & Consistency - how much fantasy experts disagree on a player's rank (standard deviation of the expert rankings). Low = tight consensus, predictable; high = wide range of opinions / boom-bust.

Column Guide

How to read the Waivo Top 200 – based on the current Waivo Draft Board (PPR).

#	Waivo board rank for PPR (by Expert Consensus Rank). 1 = best.
Tier bars	The green bars break the board into overall draft tiers. Draft within a tier; be careful reaching across a bar.
Pos Rk	Rank within position (WR5 = 5th-ranked WR).
vs ADP	Our rank vs where the market drafts him. + = we rank him higher than his cost (value); – = market drafts him ahead (reach).
Waivo Lean	Higher – value +10 or more In line within ±10 Lower – reach –10 or more.
RB Role	Bell Cow every-down lead Featured = clear starter Committee = split backfield Handcuff backup to a bell-cow/featured RB.
Spread σ*	Standard deviation of expert rankings — how much the industry disagrees. Lower = tighter consensus.
Consistency*	From Spread: Consistent $\sigma \leq 6$ Moderate $\sigma 7\text{--}15$ High Volatility $\sigma \geq 16$.
Half / Std	Expert Consensus Rank in Half-PPR and Standard scoring — how a player shifts across formats.

Skill positions only (QB/RB/WR/TE). DST and kickers sit deeper on the board. A dedicated ROS-risk column and projected points will follow the next data logic-cycle.
